FUNDRAISING DOCUMENT

Support for Unlocking the Work of Burkhard Heim

Applicant: Cosmic Water Foundation

Date: April 22, 2025

1. Introduction

Dear Sir/Madam,

The scientific progress of the past three centuries has led to an unprecedented improvement in our quality of life. Consider medical breakthroughs, modern energy systems, advanced transportation, and – in recent decades – technologies such as satellite navigation and the internet. These developments are directly rooted in fundamental insights from physics: Quantum mechanics and Einstein’s theory of relativity. Yet this progress also has its limits. Relativity and quantum mechanics are each remarkably successful in their respective domains, but they are fundamentally incompatible. A unifying theoretical framework – a so-called *theory of everything* – is essential if we are to truly understand and tackle future challenges.

2. Why Now? Why Burkhard Heim?

The German physicist Burkhard Heim (1925–2001) developed a groundbreaking theory in the second half of the 20th century that may bridge the gap between relativity and quantum mechanics. Despite severe physical limitations – caused by a serious laboratory accident – he worked in relative obscurity on a multidimensional model of reality that remains largely unknown, outside of a small group of German researchers.

The potential of Heim’s work is substantial. It may not only contribute to fundamental scientific insight but also lead to practical long-term applications – for example, in energy, space exploration, or advanced materials science.

3. Project Objective

The goal of this project is to make Burkhard Heim’s work accessible to the international scientific curriculum. This will be achieved through:

- In-depth research and evaluation of his theories;
- Publication and translation of his work into accessible academic language;
- Organization of international workshops and collaborations;
- Integration of relevant elements into existing physics curricula.

4. Requested Support

Since Heim theory would also revolutionize our understanding of water, a substance with more than 70 known physical anomalies, Wetsus, the European Centre of Excellence for Sustainable water Technology, has offered the Cosmic Water Foundation to support a theoretical Post-Doc or PhD research on the subject. Wetsus has already secured 75% of the required funding. However, additional external support is needed to cover the remaining 25%. The total required amount to be raised is **€132,000.-** payable over four years (33k€ / year). Your contribution – large or small – can make a real difference in unlocking a theoretical framework that may fundamentally transform our understanding of reality.

In the event that you decide to (co-)fund this project, we kindly ask you to let us know the amount you wish to contribute. Your pledge will be included in the overall budget. Only once the full required amount has been pledged – thanks in part to contributions from other sponsors – will we ask you to transfer the pledged amount.

Your involvement offers a unique opportunity to actively contribute to scientific progress beyond the beaten path. We sincerely hope that you share this vision with us and wish to help make this exceptional research possible.

5. Accountability and Impact

Your contribution will be used transparently and demonstrably. Donors will receive:

- Regular progress updates;
- A final report with findings and an impact analysis;
- The option for (anonymous) name recognition on publications and events;
- A personal invitation to presentations or symposia.

6. Closing Statement

We warmly invite you to help make this unique scientific initiative a reality. Your involvement can ensure that groundbreaking knowledge is not lost, but instead reaches a new generation of scientists – and with them, the future of us all.

With kind regards,

ing. Gerrit Oudakker

on behalf of the Cosmic Water Foundation
